CitroTech | TECHNICIAN

The CitroTech field-ops playbook.

One internal tool to replace spreadsheets, group texts, and paper checklists — from a closed deal through every annual maintenance visit.

5 INTERNAL USERS · 1 OPS MANAGER, 1 ADMIN, 3 TECHS **~60 ACTIVE JOBS** · 2-YEAR MAINTENANCE CYCLE

STACK · NEXT.JS · SUPABASE · VERCEL

What CitroTechnician is

30-SECOND VERSION

Every CitroTech sale becomes a multi-year relationship. Properties get an **install**, then a **Year-1** inspection, then a **Year-2 final**. CitroTechnician is the system that knows what's due, who's contacting whom, who's driving where, and who signed off when. Salesforce stays the source of truth for sold deals; this tool runs everything that happens after.

This is *not* a CRM, *not* a customer portal, and *not* a partner system. Tuned specifically to CitroTech's product lifecycle.

Who uses it · the three roles

ROLE → EXPERIENCE

Desktop · Power user

Ops Manager

Primary daily user. Runs the pipeline, dispatches techs, drives customer outreach.

- Lives in **Pipeline** + **Tasks**
- Drags jobs through stages
- Assigns techs & schedules days
- Plans NorCal / SoCal trips on the map
- Logs every call / email

Desktop · Admin

Admin

Oversight, pricing, escalations. Reads dashboards more than edits them.

- Lives in **Dashboard**
- Reviews overdue + Year-2-final jobs
- Manages team & templates in Settings
- Runs Salesforce sync
- Same powers as Ops Manager + admin tools

Mobile-only

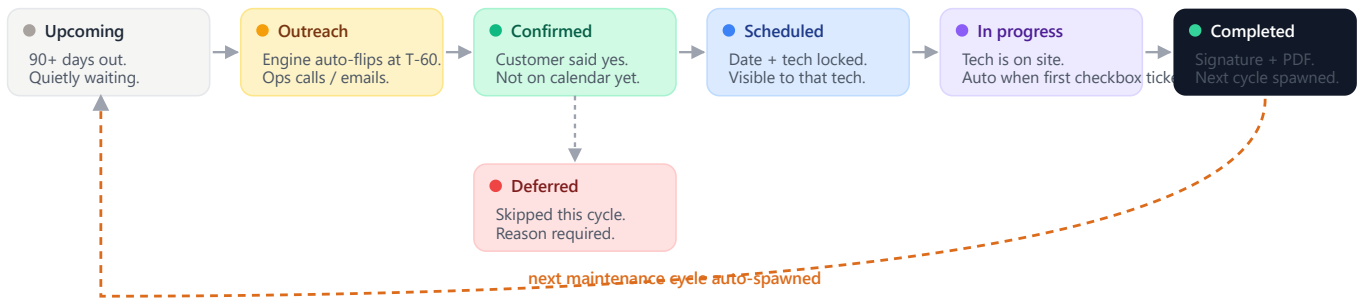
Field Tech

Mike Rivera · Carlos Mendoza · Dave Thompson. Phone in the truck, gloves on.

- Sees only **their** jobs at `/tech`
- Tap-to-check pre-job list
- Before / after photos
- Customer signature on glass
- "Complete" → PDF auto-generated

The job lifecycle

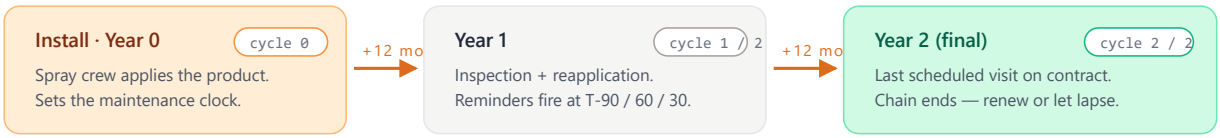
7 STAGES · AUTOMATIC + MANUAL



Drag-and-drop on the Pipeline updates stages — except **Completed**, which is only reachable through the tech's signature + PDF flow (skipping that would orphan the maintenance chain).

Maintenance cycles · the 2-year agreement

HOW THE CHAIN WORKS



cycleIndex = where this job sits in the agreement. **cyclesPlanned** = how many annual visits the contract covers (default 2). Both editable per job for one-offs and longer agreements.

Completing a job spawns its successor automatically *unless* it's the final cycle. The chain can be ended early by deferring with a reason (cancellation, sold property, customer churn).

Daily playbooks

DO THIS · IN THIS ORDER

🖥️ Ops Manager · Monday morning

1. Open `/dashboard`. Scan the four counters: **Overdue**, **Due in 60**, **Scheduled**, **This week**.
2. Hit `/tasks`. Anything the engine surfaced overnight is here. Each row is "do an outreach." Mark complete after the call.
3. Open `/pipeline`. Drag every *Confirmed* job to *Scheduled* as you book the date.
4. Open `/map?trip=1`. Cluster nearby jobs into a single tech run. Click pins → "Schedule as trip."
5. Log every call/email/text on the job's slide-over (*Communication* button) — that's the customer's paper trail.

🖥️ Admin · weekly review

1. **Dashboard → Needs Attention.** Anything red is overdue revenue. Shouldn't grow week to week.
2. **Pipeline → Year 2 (final) badges.** Those are renewal conversations to start now.
3. **Settings → Salesforce.** Last sync should be < 24 hrs old, status SUCCESS.
4. **Settings → Team.** Review tech assignments and active flags.
5. Hit **"Run the maintenance engine now"** if something feels stuck — safe, idempotent.

📱 Field Tech · on a job

Today's list
/tech
Tap a job

→

Brief
Read access notes
Get directions

→

Checklist
Tap to check
Auto → In progress

→

Photos
2 before · 2 after
Tap → camera

→

Signature
Customer signs
on the screen

→

Complete
PDF auto-generated
Next cycle queued

The **Complete** button is grey until a customer signature is captured. That's the only gate. Everything else (photos, checklist) is recommended, not enforced — if a customer is in a hurry, the tech can still close out.

Screen tour

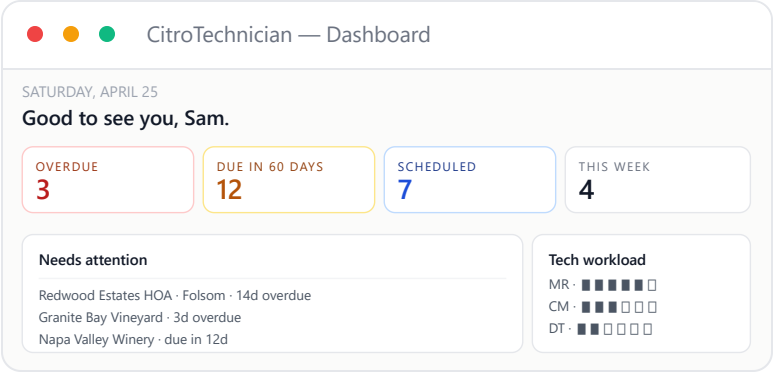
WHERE THINGS LIVE

Dashboard

`/dashboard`

The home screen. Four numbers at the top. "Needs attention" list ranks the next 6 jobs by urgency. Tech workload shows who's loaded vs. free. Recent activity is the team-wide feed.

Who: everyone signs in here.

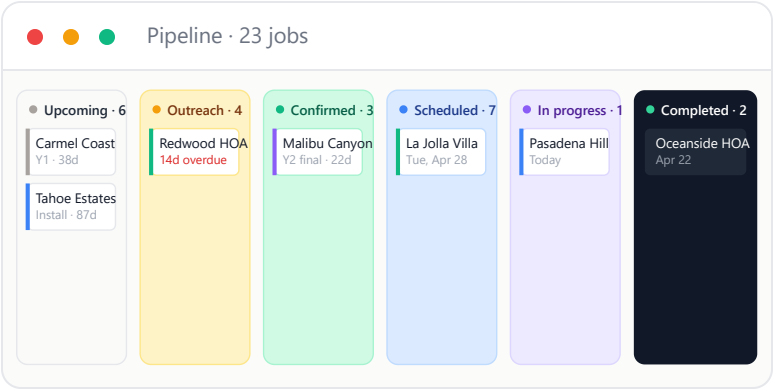


Pipeline

`/pipeline`

The Kanban. Seven columns. Drag a card from *Outreach → Confirmed* after the customer says yes. Click a card to open the slide-over with phone numbers, notes, history.

Who: Ops Manager & Admin can drag. Viewers can read.

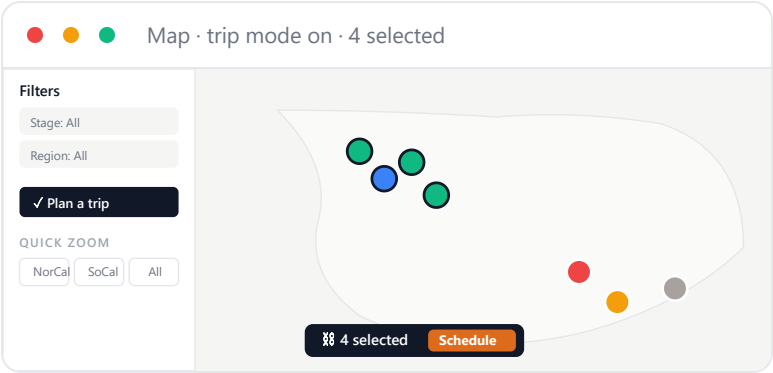


Map · trip planner

`/map`

California pinned by status. Toggle **Plan a trip**, click pins to batch-select, then "Schedule as trip" assigns the tech and dates in one move. Saves the round-trip we'd otherwise drive twice.

Who: Ops Manager & Admin can plan. Techs see read-only.



CALENDAR

/calendar

Week view, three swim-lanes (one per tech), seven day columns. Drag an unscheduled job from the right rail into a day cell to schedule it. Conflict badge if two land on the same day for the same tech.

TASKS

/tasks

The Ops Manager's inbox. Auto-generated by the maintenance engine at T-90, T-60, T-30, and overdue. Each task links to the job that triggered it. Mark complete when the call is done. Add ad-hoc tasks anytime.

JOBS & PROPERTIES & CUSTOMERS

/jobs · /properties · /customers

The data tables. Search, filter, export to CSV. Open a row → slide-over with the full job detail.

SETTINGS

/settings

Team roles, checklist templates per product (System / Spray), CSV import, Salesforce sync status, and the manual "Run engine now" button.

Quick reference

AT-A-GLANCE

Stage badges

Upcoming · Outreach · Confirmed · Scheduled · In progress · Completed · Deferred

Cycle badges

Install · Year 1 · Year 2 (final)

Permissions

ROLE	OFFICE SCREENS	TECH SCREENS	SETTINGS	DRAG & EDIT
Admin	Yes	Yes (testing)	Yes	Yes
Ops Manager	Yes	—	Yes	Yes
Tech	—	Yes (own jobs)	—	Their own jobs only
Viewer	Read-only	—	—	—

Things that happen automatically

- At **T-60 days**, every *Upcoming* job auto-flips to *Outreach* and a task lands in the inbox.
- At **T-90 / T-60 / T-30**, reminder tasks are generated for the Ops Manager.
- When a tech taps the **first checkbox**, the job moves to *In progress*.
- On **Complete**: PDF service report stored, signature locked, child cycle created (unless final year), parent moves to *Completed*.
- Each **night at 2am**, the Salesforce sync pulls Closed Won opps and creates new Install/Year-0 jobs.
- Each **morning at 9am**, the maintenance engine fires reminders.

Signing in · step by step

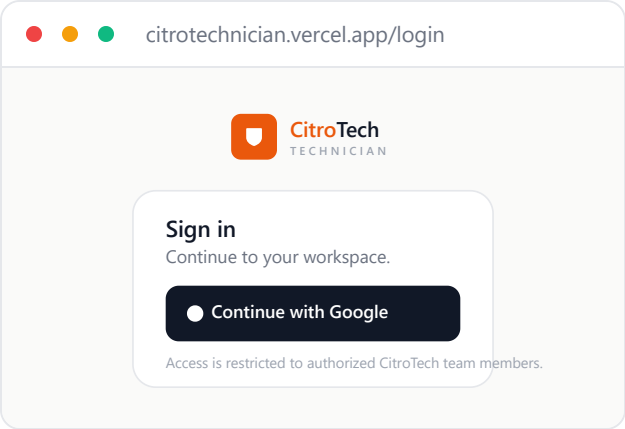
READ THIS ONCE, THEN BOOKMARK

Three rules that prevent 90% of sign-in problems.

1. **One URL only.** Use the link your admin sent you. Bookmark it. Don't type "citrotech.com" — that's the company website, not the app.
2. **Work Google account, not personal.** Sign in with your `@citrotech.com` Google account. Never your personal Gmail. If your phone is signed into both, the picker will show both — pick the work one.
3. **You must be invited first.** If you've never logged in before, ask the admin or the office manager to add you on `Settings → Team`. Until they do, the app will reject you politely.

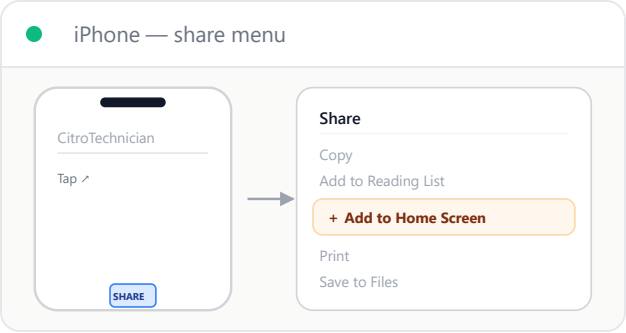
🖥️ Desktop · Ops Manager & Admin

1. Open the URL your admin sent. You'll land on the sign-in card.
2. Click **Continue with Google** (the only button on the page).
3. Google asks which account. Pick your `@citrotech.com` one.
4. You're in. The app sends you to **Dashboard** automatically.



📱 Mobile · Field Tech (one-time setup)

1. Open the URL your office sent. **Use Safari (iPhone) or Chrome (Android)** — not the in-app browser inside Messages or email.
2. Tap **Continue with Google**. Pick your work account when Google asks.
3. **Add to Home Screen** so it works like an app:
   - **iPhone:** tap the share icon (square with arrow up) → *Add to Home Screen* → *Add*.
   - **Android:** tap the three-dot menu → *Install app* or *Add to Home Screen*.
4. Open the new icon from your home screen. From now on it goes straight to **Today's jobs** — no login screen, no browser bar.



If something doesn't work

WHAT YOU SEE	WHAT IT MEANS	WHAT TO DO
"X isn't on the invite list"	Your email isn't in the team yet, or you signed in with the wrong Google account.	Confirm the email shown in the warning is your **work** address. If yes, ask the admin or the office manager to add you on `Settings → Team`. If no, click *Continue with Google* again and pick a different account.
"Sign-in didn't complete"	Google or Supabase hiccupped mid-flow. Almost always transient.	Click *Continue with Google* once more. If it fails twice in a row, take a screenshot and ping your admin.
Google asks for a password you don't know	You picked the wrong Google account, or your work account hasn't been provisioned by IT yet.	On the Google chooser, tap *Use another account* and try the right one. If your work account doesn't exist yet, IT needs to set it up first — sign-in to the app can't help you.
Page loops back to /login	Cookies are blocked or you're in an in-app browser (Messages, Slack, Gmail).	Open the URL in a real browser — Safari on iPhone, Chrome on Android, Edge/Chrome on desktop. Don't tap the link inside Messages.
You're a tech but you land on Dashboard	Your role wasn't set to TECH yet.	Ask the admin to open `Settings → Team` and change your role to **Tech**. After that, sign out and back in — you'll land on `/tech`.

First-day checklists

HAND THIS TO NEW USERS

Ops Manager

- [ ] Sign in (see *Signing in* above) & bookmark the URL
- [ ] Open `/dashboard` & recognize all four counters
- [ ] Open `/pipeline` & drag one card to a new column
- [ ] Open one job & log a phone call via "Communication"
- [ ] Open `/map?trip=1` & click two pins
- [ ] Open `/tasks`, complete one, mark another
- [ ] Find your name in `/settings/team`

Admin

- [ ] Verify your role shows ADMIN in the side nav
- [ ] Walk the dashboard with the Ops Manager
- [ ] Open `/settings/salesforce`, confirm "Configured"
- [ ] Run a manual sync, watch counters tick
- [ ] Open `/settings/templates` & review the System / Spray checklists
- [ ] Try "Run the maintenance engine now" — confirm it returns OK

Field Tech

- [ ] Sign in on your phone (see *Signing in* above)
- [ ] Add to home screen — required, not optional
- [ ] Open the new home-screen icon & confirm you land on `/tech`
- [ ] Tap one job to read the brief & access notes
- [ ] Tap "Directions" & "Call customer" — both work
- [ ] Walk through checklist + photos + signature on a test job
- [ ] Hit "Complete" & download the generated PDF

If something looks wrong — overdue counts spiking, a job stuck in a stage, a tech missing a job — open the job's slide-over and check the *Activity log* at the bottom. Every stage change, assignment, and reminder is recorded with a timestamp and the user who did it. There's almost always an answer in there before you need to dig into the database.
