CitroTechnician

The CitroTech field-ops playbook.

One internal tool to replace spreadsheets, group texts, and paper checklists — from a closed deal through every annual maintenance visit.

5 INTERNAL USERS · 1 OPS MANAGER, 1 COO, 3 TECHS **~60 ACTIVE JOBS** · 2-YEAR MAINTENANCE CYCLE

STACK · NEXT.JS · SUPABASE · VERCEL

What CitroTechnician is

30-SECOND VERSION

Every CitroTech sale becomes a multi-year relationship. Properties get an **install**, then a **Year-1** inspection, then a **Year-2 final**. CitroTechnician is the system that knows what's due, who's contacting whom, who's driving where, and who signed off when. Salesforce stays the source of truth for sold deals; this tool runs everything that happens after.

This is *not* a CRM, *not* a customer portal, and *not* a partner system. Tuned specifically to CitroTech's product lifecycle.

Who uses it · the three roles

ROLE → EXPERIENCE

Desktop · Power user

Ops Manager

Primary daily user. Runs the pipeline, dispatches techs, drives customer outreach.

- Lives in **Pipeline** + **Tasks**
- Drags jobs through stages
- Assigns techs & schedules days
- Plans NorCal / SoCal trips on the map
- Logs every call / email

Desktop · Admin

COO (Andrew)

Oversight, pricing, escalations. Reads dashboards more than edits them.

- Lives in **Dashboard**
- Reviews overdue + Year-2-final jobs
- Manages team & templates in Settings
- Runs Salesforce sync
- Same powers as Ops Manager + admin tools

Mobile-only

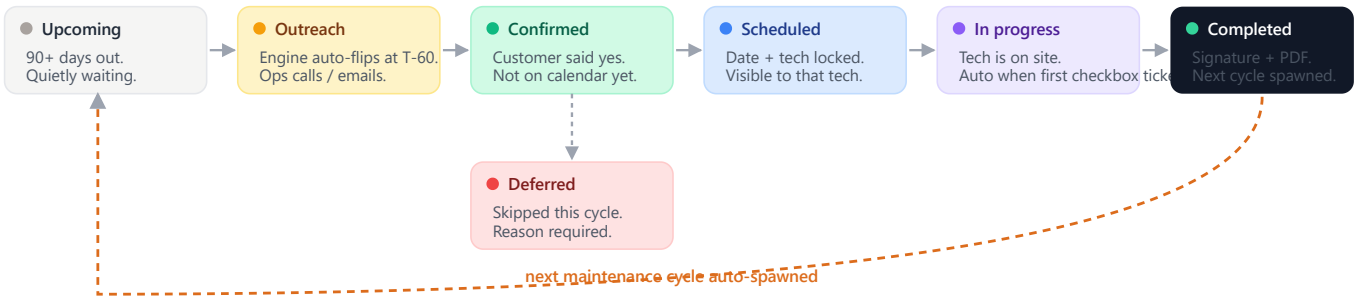
Field Tech

Mike Rivera · Carlos Mendoza · Dave Thompson. Phone in the truck, gloves on.

- Sees only **their** jobs at `/tech`
- Tap-to-check pre-job list
- Before / after photos
- Customer signature on glass
- "Complete" → PDF auto-generated

The job lifecycle

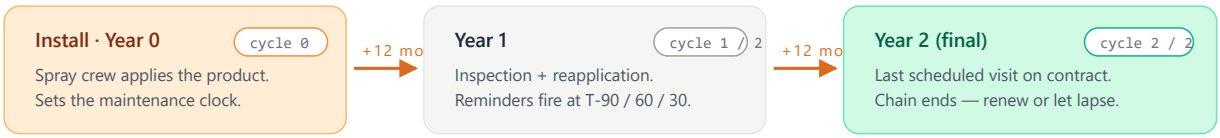
7 STAGES · AUTOMATIC + MANUAL



Drag-and-drop on the Pipeline updates stages — except **Completed**, which is only reachable through the tech's signature + PDF flow (skipping that would orphan the maintenance chain).

Maintenance cycles · the 2-year agreement

HOW THE CHAIN WORKS



cycleIndex = where this job sits in the agreement. **cyclesPlanned** = how many annual visits the contract covers (default 2). Both editable per job for one-offs and longer agreements.

Completing a job spawns its successor automatically *unless* it's the final cycle. The chain can be ended early by deferring with a reason (cancellation, sold property, customer churn).

Daily playbooks

DO THIS · IN THIS ORDER

🖥️ Ops Manager · Monday morning

1. Open `/dashboard`. Scan the four counters: **Overdue**, **Due in 60**, **Scheduled**, **This week**.
2. Hit `/tasks`. Anything the engine surfaced overnight is here. Each row is "do an outreach." Mark complete after the call.
3. Open `/pipeline`. Drag every *Confirmed* job to *Scheduled* as you book the date.
4. Open `/map?trip=1`. Cluster nearby jobs into a single tech run. Click pins → "Schedule as trip."
5. Log every call/email/text on the job's slide-over (*Communication* button) — that's the customer's paper trail.

🖥️ COO · weekly review

1. **Dashboard → Needs Attention.** Anything red is overdue revenue. Shouldn't grow week to week.
2. **Pipeline → Year 2 (final) badges.** Those are renewal conversations to start now.
3. **Settings → Salesforce.** Last sync should be < 24 hrs old, status SUCCESS.
4. **Settings → Team.** Review tech assignments and active flags.
5. Hit **"Run the maintenance engine now"** if something feels stuck — safe, idempotent.

📱 Field Tech · on a job

Today's list
/tech
Tap a job

Signature
Customer signs
on the screen

→

Complete
PDF auto-generated
Next cycle queued

The **Complete** button is grey until a customer signature is captured. That's the only gate. Everything else (photos, checklist) is recommended, not enforced — if a customer is in a hurry, the tech can still close out.

Screen tour

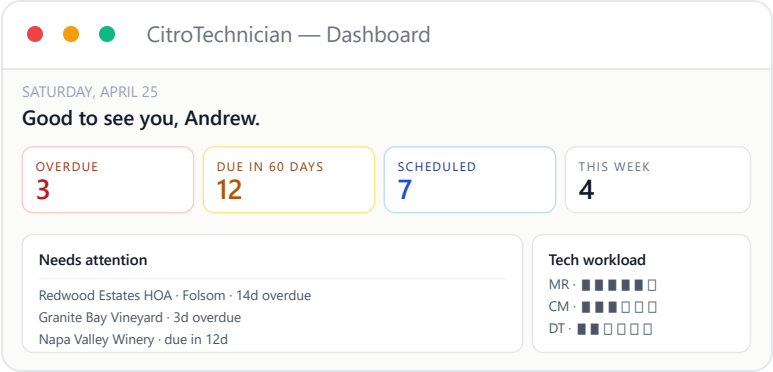
WHERE THINGS LIVE

Dashboard

`/dashboard`

The home screen. Four numbers at the top. "Needs attention" list ranks the next 6 jobs by urgency. Tech workload shows who's loaded vs. free. Recent activity is the team-wide feed.

Who: everyone signs in here.

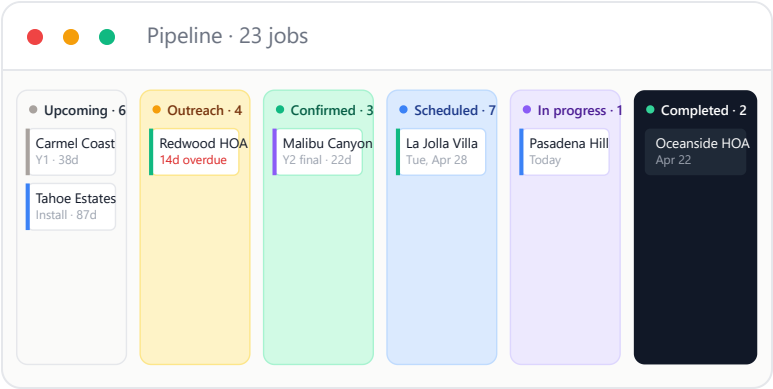


Pipeline

`/pipeline`

The Kanban. Seven columns. Drag a card from *Outreach → Confirmed* after the customer says yes. Click a card to open the slide-over with phone numbers, notes, history.

Who: Ops Manager & COO can drag. Viewers can read.

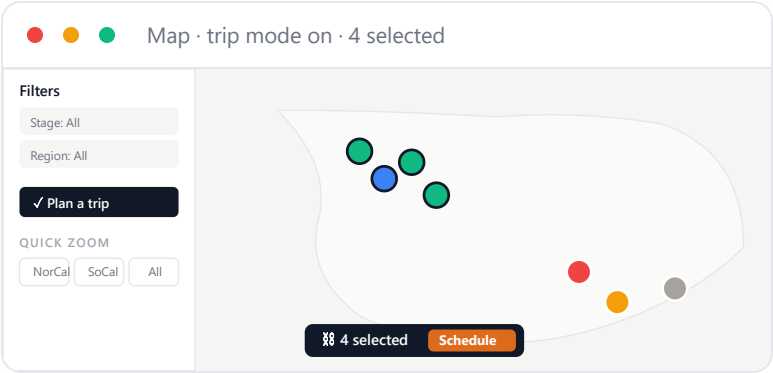


Map · trip planner

`/map`

California pinned by status. Toggle **Plan a trip**, click pins to batch-select, then "Schedule as trip" assigns the tech and dates in one move. Saves the round-trip we'd otherwise drive twice.

Who: Ops Manager & COO can plan. Techs see read-only.



CALENDAR

/calendar

Week view, three swim-lanes (one per tech), seven day columns. Drag an unscheduled job from the right rail into a day cell to schedule it. Conflict badge if two land on the same day for the same tech.

TASKS

/tasks

The Ops Manager's inbox. Auto-generated by the maintenance engine at T-90, T-60, T-30, and overdue. Each task links to the job that triggered it. Mark complete when the call is done. Add ad-hoc tasks anytime.

JOBS & PROPERTIES & CUSTOMERS

/jobs · /properties · /customers

The data tables. Search, filter, export to CSV. Open a row → slide-over with the full job detail.

SETTINGS

/settings

Team roles, checklist templates per product (System / Spray), CSV import, Salesforce sync status, and the manual "Run engine now" button.

Quick reference

AT-A-GLANCE

Stage badges

Upcoming · Outreach · Confirmed · Scheduled · In progress · Completed · Deferred

Cycle badges

Install · Year 1 · Year 2 (final)

Permissions

ROLE	OFFICE SCREENS	TECH SCREENS	SETTINGS	DRAG & EDIT
Admin (COO)	Yes	Yes (testing)	Yes	Yes
Ops Manager	Yes	—	Yes	Yes
Tech	—	Yes (own jobs)	—	Their own jobs only
Viewer	Read-only	—	—	—

Things that happen automatically

- At **T-60 days**, every *Upcoming* job auto-flips to *Outreach* and a task lands in the inbox.
- At **T-90 / T-60 / T-30**, reminder tasks are generated for the Ops Manager.
- When a tech taps the **first checkbox**, the job moves to *In progress*.
- On **Complete**: PDF service report stored, signature locked, child cycle created (unless final year), parent moves to *Completed*.
- Each **night at 2am**, the Salesforce sync pulls Closed Won opps and creates new Install/Year-0 jobs.
- Each **morning at 9am**, the maintenance engine fires reminders.

First-day checklists

HAND THIS TO NEW USERS

Ops Manager

- [ ] Sign in at the URL with your `@citrotech.com` Microsoft account
- [ ] Open `/dashboard` & recognize all four counters
- [ ] Open `/pipeline` & drag one card to a new column
- [ ] Open one job & log a phone call via "Communication"
- [ ] Open `/map?trip=1` & click two pins
- [ ] Open `/tasks`, complete one, mark another
- [ ] Find your name in `/settings/team`

COO

- [ ] Verify your role shows ADMIN in the side nav
- [ ] Walk the dashboard with the Ops Manager
- [ ] Open `/settings/salesforce`, confirm "Configured"
- [ ] Run a manual sync, watch counters tick
- [ ] Open `/settings/templates` & review the System / Spray checklists
- [ ] Try "Run the maintenance engine now" — confirm it returns OK

Field Tech

- [ ] Sign in on your phone — same Microsoft login
- [ ] Add to home screen (it's a PWA)
- [ ] Confirm you see today's jobs at `/tech`
- [ ] Tap one to read the brief & access notes
- [ ] Tap "Directions" & "Call customer" — both work
- [ ] Walk through checklist + photos + signature on a test job
- [ ] Hit "Complete" & download the generated PDF

If something looks wrong — overdue counts spiking, a job stuck in a stage, a tech missing a job — open the job's slide-over and check the *Activity log* at the bottom. Every stage change, assignment, and reminder is recorded with a timestamp and the user who did it. There's almost always an answer in there before you need to dig into the database.
